

Most Titanic passengers were in the 20 to 35 age range, with a peak around 25. There were also notable numbers of passengers both younger than 18 and older than 60, indicating a diverse age demographic.

The insight from this data is that there was a clear correlation between the passenger's room class and their survival rate on the Titanic. Passengers in higher-class accommodations had a better chance of survival.

Females had a much higher survival rate than males, at 74.2% compared to 18.9%.

The bar chart visually underscores that younger passenger had a notably higher chance of surviving the Titanic disaster compared to their older counterparts.
